

Welcome Address –

Good morning/ afternoon sir/ma'am and everyone present here today. Our group is group number 35. My name is Christy James Vas and my fellow teammates are (pointing at them) Anish Rupert D Souza and Anish D Souza.

Language is so much more than just a tool allowing us to communicate. It is the expression of culture, society, and beliefs. Thousands of cultures exist around the world, all expressing the specifics of their daily lives through their own languages. Now being specific to a particular language today, when you visit the Konkani regions of the Indian subcontinent for whatever purpose it might be. **Konkani** is the language that is used to communicate with the crowd of those regions. In my opinion it's easy if you know the language, but for those who don't....It can be a real trouble communicating.

What do we do? The Konkani language isn't available on Google Translate. There's several resources but they don't offer any accurate translation results. THIS is where our project that we are working on comes into picture today. Introducing KOGO.

KOGO. Meaning Translating Konkani on the Go.

Through our application, translating from English to Konkani is made easier than ever. With extra features and resources that we've yet to implement. We've prepped to give users the full experience of translating from English to Konkani.

The structure described below is what's planned at the moment to undergo further development
